

Marvin Test Solutions Extends Life of Legacy Semiconductor Test Systems

Marvin Test Expansion Kit (MTEK) Adds Capability to Existing ATE

Irvine, Calif. – June 27, 2017 - Marvin Test Solutions, Inc., a trusted provider of globally-deployed innovative test solutions for military, aerospace, and manufacturing organizations today announced the release of a new semiconductor test subsystem aimed at extending the life of legacy semiconductor testers. The MTEK Subsystem (Marvin Test Expansion Kit) adds test capabilities to legacy semiconductor test systems that lack the ability to meet the test requirements of current devices.

Based on MTS' extensive portfolio of PXI/PXIe chassis and instrumentation as well as selections from other industry-leading suppliers, MTEK allows customers to configure a subsystem with exactly the resources needed to deliver the capabilities lacking in their current legacy ATE. MTEK is a compact, easy-to-integrate, open architecture plug and play solution that cost-effectively adds RF, hi-performance digital, and/or hi-performance analog capabilities. MTEK is compatible with multiple legacy semiconductor test platforms, including Teradyne, LTX/Credence, Eagle, ASL100, Sentry, and Verigy. Easily expandable in the field, MTEK is designed to support both engineering and production environments.

“Our customers were looking for a solution that would allow them to extend the life of their existing test systems without the associated capital investment of complete replacement,” said Stephen T. Sargeant, CEO of Marvin Test Solutions. “MTEK provides an upgrade path with the additional test capabilities they need as their requirements change.”

MTEK and other MTS semiconductor test solutions will be showcased at SEMICON West July 11 – 13 at the Moscone Center in San Francisco, CA. Attending the event will be CEO Stephen T. Sargeant, and Director of North American Sales Jim Fraine. To arrange a meeting and/or demonstration, please email MerielleL@MarvinTest.com.

About Marvin Test Solutions

Marvin Test Solutions, a vertically integrated aerospace test and measurement company, has delivered innovative, feature-rich test solutions for military, aerospace, and semiconductor organizations since 1988. As a member of The Marvin Group, an award-winning company with a storied 50-year history, Marvin Test Solutions has test equipment deployed in use around the world.
